REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 7, 16, the prior arts fail to teach or fairly suggest a method for dynamically selecting a communication channel between an access point (AP) and a plurality of stations located within the coverage area of a basic service set (BSS) in a wireless local area network, the method comprising the steps of:

(b) requesting, by said AP, a channel signal quality measure to at least one of said plurality of stations;

(c) scanning a set of channels available for use by the plurality of stations to determine whether a signal from an adjacent BSS is received;

(d) if the adjacent BSS signal is detected, determining a signal quality measure of each channel of the set of channels based on a received signal strength indication (RSSI) and a packet error rate (PER) of all the channels measured by the plurality of stations to the AP, in combination with other limitations as specified in the independent claims 7, 16.
